Alguien ha denunciado a "El Flautista" por hacer actividades empresariales en una vivienda personal. Necesitamos encontrar a la persona en cuestión para convencerlo de que retire la denuncia o se nos caerá el pelo. El problema es que ha habido un apagón en la incubadora de Erlich y todos los discos duros han muerto menos el de Gilfoyle. En ellos estaban las credenciales de acceso (encriptadas) a la plataforma de la empresa y la única pista del denunciante. Debes conseguir las credenciales de alguno de los archivos de Gilfoyle para entrar y poder encontrar la dirección de la persona que ha montado todo este lío.

Investigamos un poco y tenemos una referencia en la primera misión de los retos de UAM y en particular en una parte el writeup de https://donttouchmy.net/write-up-una-al-mes-mission001/. Por lo tanto pasamos a utilizar Volatility:

Observamos que se estaba ejecutando un proceso que era soffice.exe y soffice.bin, que es el LibreOffice. Sospechamos de este proceso y pasamos a filescan con un grep:

```
root@kali:~/Desktop/uam/SiliconValley# volatility filescan
--profile=Win2008R2SP1x64 -f GILFOYLE-HELLDD.raw | grep odt

Descubrimos un archivo llamado info.odt que nos arroja:
